

Configuring UH VPN for OSX Mountain Lion

1. Click the **Apple** menu > **System Preferences** and then **Network**.

2. Click the **+** button and modify **Interface**, **VPN Type**, and **Service Name**, then click **Create**.

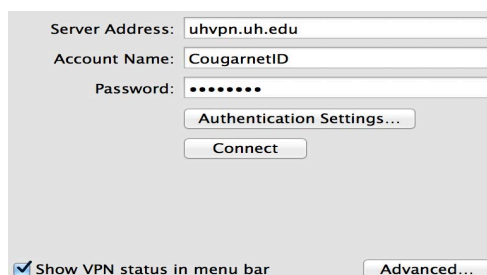

Interface: **VPN**
VPN Type: **Cisco IPSec**
Service Name: **UHVPN**
Click **Create**.

TIP To remove the VPN configuration, select the VPN service and click Delete (-).

3. Enter the **Server**, **Account Name**, and **Password** and select the **"Show VPN status"** box.

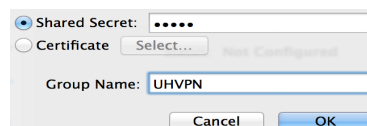

Server: **uhvpn.uh.edu**
Account Name: **CougarNetID**
Password: **CougarNet Password**
Select box: **"Show VPN status..."**
Click **Authentication Settings...**

TIP To avoid lockouts, update devices with new CougarNet passwords.

4. Enter the **Shared Secret** and **Group Name**, click **OK** > **Connect** > **Apply**.

Shared Secret: **UHVPN** (uppercase only)
Group Name: **UHVPN** (uppercase only)

5. Also connect by clicking the **VPN icon** in the top menu bar.

If prompted enter your CougarNet credentials.
